

Address Research Report

Best-guess addresses for clinics + MVA attorneys missing real locations
Generated 2026-05-29 · WCG Marketing Planner · Phase 142

READ THIS FIRST — These are research-based best guesses, not verified data. Many entries have name conflicts, city-label errors, or no published street address. The Confidence column tells you how strong each guess is. Nothing has been applied to the app yet — review each row before sending corrections back.

Confidence levels

- HIGH** — Clear, unambiguous match. Doctor + clinic name + city all align. Safe to apply.
- MEDIUM** — Likely match but with caveats — e.g., doctor at a different city, name slightly off. Verify.
- LOW** — Name too generic OR multiple plausible candidates. Pick from the listed options.
- UNCERTAIN** — Could not find a confident match. Recommend asking the original referrer for the address.

What to do next

1. Review each row in this PDF. Pay special attention to UNCERTAIN entries — many appear to have wrong city labels (clinic in McKinney tagged as Frisco, doctor in Austin attributed to McKinney clinic, etc.).
2. For HIGH/MEDIUM confidence entries: if the address looks correct, mark it OK on your end and I will apply them to BUSINESS_GEOCODES (with addressVerified: true). The pin will land on the actual building.
3. For LOW/UNCERTAIN entries: ask the original referrer or the assigned member to confirm the real address before I apply anything. I will NOT guess on these.
4. For entries where city label is wrong: tell me the corrected city and I will update both the bank entry AND the geocode.
5. Outreach entries (4 missing) are deliberately skipped per your instruction — we will tackle them after the clinics/MVAs are resolved.
6. After this batch is verified and applied, the pins for these 40 clinics/MVAs will move from city-centroid placeholder to their real street addresses. The OSRM polyline will visibly connect them.

All addresses in this PDF are research-based guesses, not verified. Sources are linked for each entry. Nothing has been applied to the app — the data is unchanged until you say go.
